

Managers' Update - Review of Q1 2024

Summary View

- Based on analysts' consensus estimates, the Fund is trading on a price to earnings ratio of 11.1x on 2024 earnings and 9.5x on 2025 earnings. The current set of holdings is trading at more than two standard deviations below their 15-year average.
- Based on consensus analyst estimates, the Fund's holdings are expected to grow earnings by 13% in 2024 and 15% in 2025. At current valuations, we believe the Fund represents outstanding value to investors for the growth we believe to be on offer.

Returns by Market in the First Quarter

(Data from 12/31/23 to 03/31/24, returns in USD, source: Bloomberg, Guinness Atkinson calculations)

In the first quarter, the MSCI China Index fell by 2.2% but this marked divergent monthly performance. In January, the MSCI China Index sold off by 10.6% as macro data for December came in weaker than expected and no significant government stimulus was announced. In particular, the small and mid cap stocks sold off sharply while large cap stocks outperformed. This was due to the buying patterns of the "National Team", which represents state funds such as Central Huijin Investment (a sovereign wealth fund) as well as funds owned by state owned insurance companies and banks. To support the market, the National Team started to buy local ETFs in mid-January but most of the buying was concentrated in ETFs tracking the CSI 300 Index, which tracks the largest 300 China A shares. Retail investors followed the National Team's lead, selling small- and mid-cap stocks, and rotating into large cap stocks. Hence small- and mid-caps underperformed significantly in January.

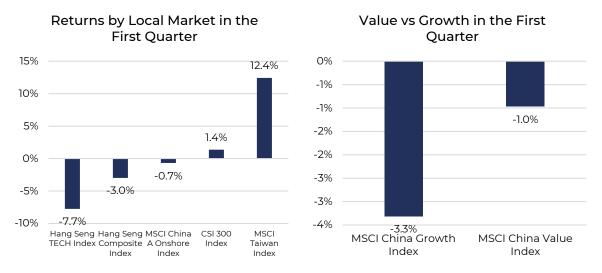

Chinese markets then rallied in February, with the MSCI China Index rising 8.4%. At the beginning of February, the National Team stepped up the size of its support and began to diversify its purchases, buying more ETFs tracking small and mid-cap stocks. Therefore, there was a very strong rally in February as retail investors moved back into small and mid-cap stocks, before the Chinese New Year holidays. The government also made it harder to conduct short selling, which reduced selling pressure on the market. Some practices we consider to be genuinely risky – for example, some investors go short on a stock, and then use margin loans to buy the stock back. Some brokers have stopped providing margin loans for this purpose. Other practices are considered standard, and these have been restricted. For example, now investors are not allowed to buy a stock and go short on the same day. Brokers are not allowed to borrow

Managers' Update - Review of Q1 2024

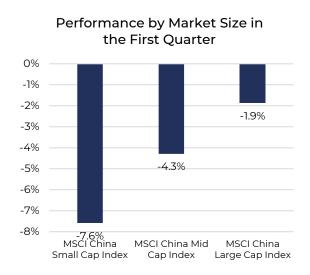

shares that will be used for short selling. Restricted shares (such as those granted in an employer shareholder ownership plan) can no longer be lent.

In March, markets stabilized as the MSCI China Index rose by 0.9%. There were no major events but the macro data covering January and February was generally better than expectations. Industrial production rose by 7.0% year-on-year while manufacturing investment rose by 9.4% despite the 9.0% drop in real estate investment.

(Data from 12/31/23 to 03/31/24, returns in USD, source: Bloomberg, Guinness Atkinson calculations)

Onshore stocks outperformed in the first quarter, as the MSCI China A Onshore Index fell by 0.7% while the Hang Seng Composite Index fell by 3.0%. The MSCI China Growth Index fell 3.3% against the value index which fell by 1.0%.

(Data from 12/31/23 to 03/31/24, returns in USD, source: Bloomberg, Guinness Atkinson calculations)

We highlight the significant differences between smaller and larger companies. Due to greater support from the National Team, large caps in the MSCI China Index outperformed, falling 1.9%. Mid caps and small caps, which overall benefited less from government support, fell 4.3% and 7.6% respectively.

Managers' Update - Review of Q1 2024

(Data from 12/31/23 to 03/31/24, returns in USD, source: Bloomberg, Guinness Atkinson calculations)

In the first quarter, the best performing sectors in the MSCI China Index were Energy (total return +17.6%), Materials (+9.8%) and Utilities (+2.9%). Rising crude oil prices led to strength for oil names, who also benefited more attention towards value stocks. Within Materials, stronger names were Zijin Mining, CMOC Group, China Hongqiao Group and Aluminium Corporation. Utilities benefited as a defensive sector in a risk-off environment at the beginning of the year.

The weakest sectors were Health Care (total return -20.7%), Real Estate (-15.9%) and Information Technology (-8.0%). In Healthcare, a bill by a congressional committee in the US aimed to restrict US groups from sharing genetic information with certain Chinese biotech companies, leading to weakness for Wuxi Biologics, Innovent Biologics and Beigine. Real Estate names were weak as volume of property sold continues to fall, along with prices. Within Information Technology, weaker names were Sunny Optical, Lenovo, Xiaomi and Kingdee.

Stock Commentary

In the quarter, the best performing stocks in the Fund were Xinyi Solar, Hangzhou First Applied Material and Weichai Power.

Xinyi Solar (total return + 32.6%) - in 2023, revenue grew by 30% and earnings per share (EPS) grew by 10%. Xinyi Solar is the world's largest manufacturer of solar glass, which is used to make solar panels. The first half of 2023 was weak but there was a clear recovery in the second half as volumes continued to increase and importantly margins improved. The margin improvement was driven by lower soda ash and natural gas prices, an increase in average selling prices and a better product mix. In 2023 volumes of solar glass sold by the company increased by 49% and so to deal with continued growth, Xinyi Solar is building new plants in China, Malaysia and Indonesia. Management expect demand to increase by 20-30% in 2024.

Hangzhou First Applied Material (total return +15.1%) – First Applied Material is the world's largest manufacturer of solar film, which protects solar panels. Though the company has not yet reported its fourth quarter results, management are expecting global demand for solar modules to increase by 20-30% this year. In the first quarter of 2024, the company is expecting its solar film shipments to increase

by 30% in volume terms, on a year-on-year basis. This is to be driven by China, Europe and Central Asian countries. To diversify its production facilities, new factories are being built in Vietnam and Thailand.

Weichai Power (total return +14.2%) - Weichai is a manufacturer of engines for heavy duty trucks. In 2023, the business had success in LNG engines (liquefied natural gas) and increased margins across its various segments. Looking towards future growth, the company is expecting greater demand for large bore engines which are used to construct artificial intelligence (AI) data centers.

The weakest stocks in the Fund were China Medical System, Travelsky and Venustech.

China Medical System (CMS) (total return -40.7%) – CMS reported an unexpected decline in sales in the second half of 2023. For some of its larger drugs, the decline in prices was larger than management had previously guided for. Combined with the anti-corruption crackdown across the sector which led to hospitals being cautious, revenue in the second half of 2023 declined by 28%. As CMS is about to start launching new products, the business did not cut back on its sales staff and so operating margins also fell significantly. The business is likely to be under pressure from price cuts in the first half of 2024. New drug launches are expected to contribute to sales growth but it may take a few years for these products to contribute to profitability.

Travelsky (total return -29.9%) supplies data for China's aviation industry and processes nearly all passenger flights in the country. One segment of the business, System Integration, is involved with installing equipment and software to airports and airlines. The segment saw a significant drop in revenue in the second half of 2023 whereas in the last set of interim results, management guided for positive growth. It seems slower progress on certain projects as well as payment delays led to the miss. Additionally across the business higher labor costs led to a rise in expenses, overall leading to a large earnings miss. The stock sold off 25% on the profit alert. Our view is that the System Integration segment, due to being project based, can have a more volatile growth profile than the core business. It may turn out that the segment rebounds in the future once the delayed projects are completed. Travelsky remains one of the cheapest quality stocks which give exposure to China's rebound in travel, both in the short and long-term. Therefore, we decided to top up on the position following the sell off.

Venustech (total return -24.3%) - based on its pre-announcement, Venustech reported 2% revenue growth and 17% net profit growth for 2023. Implied revenues in the fourth quarter fell on weaker government orders, but net margins remained well above Venustech's main competitors. For this year, management expect orders to pick up from parent company China Mobile. Venustech also expects to further benefit from cross-selling opportunities with its parent company.

Outlook

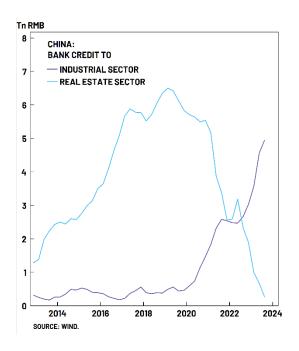

We argue that the government has, for the past few years, been deleveraging the property sector intentionally. There are multiple reasons behind this. The first was the accumulation of debt, particularly amongst private property developers which has for some time presented itself as a source of systematic risk. Since 2021, the government has been clamping down on the use of the aggressive debt funded growth in the property sector, leading to Evergrande and other private property developers' business models failing.

Guinness Atkinson

China & Hong Kong Fund

Managers' Update - Review of Q1 2024

The second reason behind the intentional deleveraging push in the property market is driven by China's longterm economic plan. Ultimately, for China to become rich on a per-capita basis, capital needs to be diverted away from property and towards the new pillar industries. Real estate accounts for at least ~20% of China's GDP and 23% of its capital investment. China's GDP per capita is currently ~\$12,500 per person and to take it to the level of countries such as Korea and Japan, with GDP per capita of ~\$35,000 and \$39,000 respectively, real estate is not the answer. The answer is also unlikely to be found in other industries that foreign investors have historically been attracted to in China, such as video games (Tencent) and e-commerce (Alibaba). For China to become a wealthy nation, the new pillar industries are going to need capital to grow. These industries include (but are not limited to) the electric vehicle (EV) supply chain, industrial automation, semiconductor manufacturing and research into pharmaceutical development and healthcare equipment. We can see in the chart that while

(Source - BCA Research)

lending to the real estate sector has plummeted, at the same time lending to the industrial sector, which contains many of these pillar industries, has increased significantly.

China's current problem is that while in the long-term the deleveraging of the property sector is positive, in the short-term, because of its large contribution to GDP, the declining real estate market is creating a drag on growth. Meanwhile while the new pillar industries are growing, they are still relatively small in size and are certainly not large enough to offset the weakness in real estate.

So at what point could the new pillar industries become large enough to offset the weakness in property? Goldman Sachs looked specifically at EVs, batteries, wind and solar power generation as their proxy for the pillar industries. In their scenario, by 2028 the new pillar industries may become large enough to offset the weakness in property, assuming property continues to decline. Of course, their work only looks into three specific industries and ignores China's other pillar industries, so using similar logic we believe that well before 2028, China's pillar industries are likely to become large enough to offset the falling real estate market.

However this point is still a few years away. Until then, government stimulus is needed to help the economic navigate the ongoing economic transition. In January, the required reserve ratio (RRR) was cut by 0.5 percentage points. Relending and rediscount rates for the rural sector and small and medium enterprises (SMES) was cut by 0.25 percentage points. In February, the five year loan prime rate (LPR) was cut by 0.25%, to 3.95%, marking the biggest cut ever.

We remain of the view, however, that fiscal stimulus is likelier a more effective tool than monetary policy but even here there are constraints. Some local governments have high levels of debt and are facing issues servicing debt given their revenue shortfalls. Income from land sales makes up ~50% of local government revenue and since land sales are weak, local government revenues are under significant strain. The central government will have to bear the brunt of fiscal easing. Here, we see signs the government may agree. In October, the government increased the official fiscal deficit from 3.0% to 3.8%

Guinness Atkinson

China & Hong Kong Fund

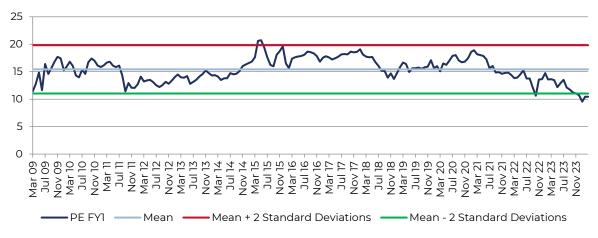

of GDP, allowing it to issue RMB 1 trn in central government bonds, the proceeds of which will be spent on infrastructure in areas with recent natural disasters. With more government spending, which can come in various forms, the stimulus can better offset the weakness from property.

From an investment perspective, China's continues to become cheaper. On estimated 2024 earnings, the Fund's holdings in aggregate are trading at a forward price/earnings ratio of 10.7x which is now more than two standard deviations below the holdings' 15-year average.

Earnings growth is critical at current valuations for China. Here we point out the Fund's strong track record in this respect. Over the past decade, our holdings in aggregate have grown earnings by 9% a year. Meanwhile the MSCI China Index has seen earnings fall by 1% a year over the past decade, despite all of the economic growth in China. We argue a passive approach is not the best way to get exposure to high quality, compounding companies in China. Based on consensus analyst estimates, the Fund's holdings in aggregate are expected to grow earnings by 13% in 2024 and 15% in 2025. At current valuations, we believe this represents outstanding value to investors for the growth on offer.

Performance

In the first quarter, relative to the MSCI China Index, areas which helped the Fund's performance were:

- Stock selection in the Information Technology sector, driven by Xinyi Solar (total return +32.8%) and Hangzhou First Applied Material (+22.1%).
- Stock selection in the Consumer Discretionary sector, driven by Haier Smart Home (+10.2%), Zhejiang Supor (+7.9%) and Geely Automobile (+7.4%). The Fund also benefited from not holding Pinduoduo (-20.6%) and Nio (-50.4%).

In the first quarter, areas which detracted from the Fund's relative performance were:

Managers' Update - Review of Q1 2024

- Stock selection in the Financials sector, driven by AIA Group (total return -22.9%) and Hong Kong Exchanges and Clearing (-13.8%). The underweight to state owned banks also detracted against the Fund.
- Both stock selection and the overweight to the Healthcare sector, driven by China Medical System (-40.7%), CSPC Pharmaceutical (-15.5%) and Sino Biopharmaceutical (-13.1%).
- Stock selection in the Consumer Discretionary sector, driven by not holding Meituan, Li Auto, Trip.com and Yum China.
- Underweight to Energy and Materials, where the Fund has no exposure. The Fund targets quality companies which give exposure to the structural growth themes in China. In our universe, there are very few Energy names which give this exposure. The Material names which were strong in the quarter were related to mining and metals these companies do not generally make the quality threshold we target in the Fund.

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data shown is current to the most recent month and quarter end. To obtain performance as of the most recent month end, please visit www.gafunds.com or call 1-800-915-6565. Performance data does not reflect the 2% redemption fee for shares held less than 30 days and, if deducted the fee would reduce the performance noted.

The Fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The statutory and summary prospectus contains this and other important information about the investment company, and it may be obtained by calling 800-915-6566 or visiting gafunds.com. Read it carefully before investing.

Investments in foreign securities involve greater volatility, political, economic and currency risks and differences in accounting methods. These risks are greater for emerging markets countries. The China and/or Hong Kong stock markets in which the Fund invests may experience periods of volatility and instability. These fluctuations may cause a security to be worth less than it was at the time of purchase. Market risk applies to individual securities, a particular sector or the entire economy. China and/or Hong Kong stocks may fall out of favor with investors, the value of Chinese currencies may decline relative to the U.S. dollar and/or China or Hong Kong stock markets may

decline generally. The Fund invests in invest in small-cap or mid-cap, which involve additional risks such as limited liquidity and greater volatility, than investments in larger companies.

One cannot invest directly in an Index.

P/E ratio is a current stock price over its earnings per share. The forward P/E ratio is a current stock's price over its "predicted" earnings per share. If the forward P/E ratio is higher than the current P/E ratio, it indicates decreased expected earnings.

Standard deviation is a statistic that measures the dispersion of a dataset relative to its mean and is calculated as the square root of the variance. If the data points are further from the mean, there is a higher deviation within the data set. A volatile stock has a high standard deviation, while the deviation of a stable blue-chip stock is usually rather low.

The compound annual growth rate (CAGR) is the rate of return (RoR) that would be required for an investment to grow from its beginning balance to its ending balance, assuming the profits were reinvested at the end of each period of the investment's life span.

The Producer Price Index (PPI) program measures the average change over time in the selling prices received by domestic producers for their output. The prices included in the PPI are from the first commercial transaction for many products and some services.

The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. Indexes are available for the U.S. and various geographic areas. Average price data for select utility, automotive fuel, and food items are also available.

USD/CNY is the abbreviation for the US Dollar and Chinese Yuan pair. It shows how much the USD (base currency) is worth as measured against the CNY (counter currency).

The MSCI China A Index captures large and mid-cap representation across China securities listed on the Shanghai and Shenzhen exchanges. The index covers only those securities that are accessible through "Stock Connect". The index is designed for international investors and is calculated using China A Stock Connect listings based on the offshore RMB exchange rate (CNH).

The MSCI China A Onshore Index captures large and mid cap representation across China securities listed on the Shanghai and Shenzhen exchanges.

The Shanghai Shenzhen CSI 300 Index is a market capitalization-weighted stock market index designed to replicate the performance of the top 300 A-share stocks traded in the Shanghai and Shenzhen stock exchanges.

Hang Seng Composite Total Return Index is a market capitalization weighted index that monitors the performance of stocks listed in Hong Kong.

In China, the National Bureau of Statistics (NBS) Manufacturing Purchasing Manager Index measures the performance of the manufacturing sector and is derived from a survey of more large-scale, state-owned

companies. The Manufacturing Purchasing Managers Index is based on five individual indexes with the following weights: New Orders (30%), Output (25%), Employment (20%), Suppliers' Delivery Times (15%) and Stock of Items Purchased (10%), with the Delivery Times index inverted so that it moves in a comparable direction.

The Basel Accords are a series of three sequential banking regulation agreements (Basel I, II, and III) set by the Basel Committee on Bank Supervision (BCBS). Basel III is an international regulatory accord that introduced a set of reforms designed to mitigate risk within the international banking sector by requiring banks to maintain certain leverage ratios and keep certain levels of reserve capital on hand. Basel III is an internationally agreed set of measures developed in response to the financial crisis of 2007-2009.

A nonperforming loan (NPL) is a loan that is in default due to the fact that the borrower has not made the scheduled payments for a specified period.

The Caixin PMI measures the performance of the manufacturing sector and is derived from a survey of more private companies.

MSCI AC Asia Pacific ex Japan Index is free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of countries in the Asia Pacific region.

MSCI Europe Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of European markets.

MSCI EM Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of Emerging markets in Asia, Europe, Middle East, Africa and Latin America.

MSCI China Index captures large and mid cap representation across China A shares, H shares, B shares, Red chips, P chips and foreign listings (e.g. ADRs). With 703 constituents, the index covers about 85% of this China equity universe.

The MSCI China A Index captures large and mid-cap representation across China securities listed on the Shanghai and Shenzhen exchanges. The index covers only those securities that are accessible through "Stock Connect". The index is designed for international investors and is calculated using China A Stock Connect listings based on the offshore RMB exchange rate (CNH).

The MSCI China A Onshore Index captures large and mid cap representation across China securities listed on the Shanghai and Shenzhen exchanges.

MSCI Hong Kong Index is a capital weighted stock index designed to measure the performance of the large and mid cap segments of the Hong Kong market. It has 48 constituents and covers approximately 85% of the free float-adjusted market capitalization of Hong Kong equity stocks.

MSCI Japan Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of the Japanese market.

MSCI World Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets.

MSCI China Growth Index captures large and mid cap securities exhibiting overall growth style characteristics across the Chinese equity markets.

MSCI China Value Index captures large and mid cap Chinese securities exhibiting overall value style characteristics. The value investment style characteristics for index construction are defined using three variables: book value to price, 12-month forward earnings to price, and dividend yield.

S&P 500 Index is a market-capitalization-weighted index of leading publicly traded companies in the U.S.

The Hang Seng Composite Index ("HSCI") offers a comprehensive Hong Kong market benchmark that covers about the top 95th percentile of the total market capitalisation of companies listed on the Main Board of the Stock Exchange of Hong Kong ("SEHK").

Hang Seng TECH Index represents the 30 largest technology companies listed in Hong Kong that have high business exposure to technology themes and pass the index's screening criteria.

The MSCI Taiwan Index is designed to measure the performance of the large and mid cap segments of the Taiwan market. With90 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in Taiwan.

The MSCI China Small Cap Index is designed to measure the performance of the small cap segment of the China market. With 241 constituents, the index represents approximately 14% of the free float-adjusted market capitalization of the China equity universe.

The MSCI China Mid Cap Index is designed to measure the performance of the mid cap segments of the Chinese markets. With 399 constituents, the index covers approximately 15% of the free float-adjusted market capitalization in China.

The MSCI China Large Cap Index captures large cap representation across China A shares, H shares, B shares, Red chips, P chips and foreign listings (e.g. ADRs). With 305 constituents, the index covers about 85% of this China equity universe.

Privately owned enterprise (POE) is a business that is managed by an independent company or private individual — rather than the Chinese Government or the host country government. While these companies may issue stock and have shareholders, their shares are not listed on public exchanges.

American depositary receipt (ADR) refers to a negotiable certificate issued by a U.S. depositary bank representing a specified number of shares—usually one share—of a foreign company's stock. The ADR trades on U.S. stock markets as any domestic shares would.

Earnings per share (EPS) is calculated as a company's profit divided by the outstanding shares of its common stock.

Many investors use the price-to-book ratio (P/B ratio) to compare a firm's market capitalization to its book value and locate undervalued companies. This ratio is calculated by dividing the company's current stock price per share by its book value per share (BVPS).

The dividend yield, expressed as a percentage, is a financial ratio (dividend/price) that shows how much a company pays out in dividends each year relative to its stock price.

Price/Earnings ratio (P/E) is an equity valuation multiple. It is defined as market price per share divided by annual earnings per share

M2 is the U.S. Federal Reserve's estimate of the total money supply including all of the cash people have on hand plus all of the money deposited in checking accounts, savings accounts, and other short-term saving vehicles such as certificates of deposit (CDs). Retirement account balances and time deposits above \$100,000 are omitted from M2.

USDCNY exchange rate refers to how many Renminbi one US dollar is worth.

Opinions expressed are subject to change, are not a guarantee and should not be considered investment advice. Past performance is not indicative of future results.

Dividends are not guaranteed and may fluctuate. Earnings growth and Income growth are not a measure of future performance.
